## EDUCATION

---

**PhD (Safe AI)** Jan 2021 – Present

*Indian Institute of Technology Bombay, Mumbai, India*

Thesis: *From Counterexamples to Confidence: Advancing Neural Network Verification.*

Status: Thesis submitted.

**Master of Science (Computer Science)** Jul 2015 – May 2017

*Chennai Mathematical Institute, Chennai, India*

Master's Thesis: *Property Checking of Array Programs involving Quantification over Array Elements*  
(Supervisor: Shrawan Kumar, TCS Research Pune, India).

**Bachelor of Technology (Information Technology)** Jul 2011 – May 2015

*Rajkiya Engineering College, Bijnor (studied at HBTI Kanpur, India)*

Percentage: 68.04%

## PHD THESIS SUMMARY

---

*Title: From Counterexamples to Confidence: Advancing Neural Network Verification. Advisors: [Prof. Ashutosh Gupta](#) and [Prof. S. Akshay](#).* My PhD research focused on formal robustness verification of neural networks, an NP-complete problem. I developed scalable counterexample-guided abstraction refinement techniques, analyzed robustness in terms of false and true positives, and incorporated classification confidence to obtain more practical robustness guarantees. I also worked on learning and explaining reward functions in inverse reinforcement learning.

## INTERESTS

---

- **Safe AI:** Formal verification and certification of AI models for robustness and correctness before and during deployment, including runtime safety guards and explainability, by integrating formal methods with machine learning.

## EXPERIENCE

---

*Note: The Ph.D. and full-time research roles overlapped during Jan 2021 – Present, as the doctoral program was sponsored by TCS Research.*

- **Scientist** **TCS Research, Pune, India**  
*Aug 2023 – Present*
  - Conducting research on the formal verification and robustness analysis of neural networks, aligned with Ph.D. objectives and internal R&D initiatives.
  - Developed scalable and efficient verification methods applicable to large-scale models, including those trained on the ImageNet-1K dataset.
- **Researcher** **TCS Research, Pune, India**  
*Jul 2017 – Jul 2023*
  - Designed and implemented verification techniques for array programs, integrated into the portfolio verifier VERIABS, contributing to multiple gold medals at SV-COMP (2019 - 2021).
  - Performed path-sensitive analysis on large industrial C codebases, reducing approximately 80% of false-positive warnings.

## INTERNSHIP

---

- **Oct 2023, Three-Week Research Visit, CNRS@NUS Lab, Singapore**  
I worked on the robustness verification of neural networks under the supervision of [Prof. Blaise Genest](#). In particular, I developed techniques to efficiently identify branching heuristics for neural network verification problems, improving the scalability of robustness analysis.

## SKILLS

---

- **Tools Developed:** [DREFINE](#), [QUANTLEARN](#), [VERIABS](#).
- **Tools Used:**  $\alpha$ - $\beta$ -CROWN, MARABOU, NEURALSAT, Z3, Gurobi.
- **Selected Courses:**
  - **Core Foundations:** Logic, Automata Theory, Algorithms.
  - **Formal Methods:** Model Checking, Analysis of Concurrent Programs, Automated Reasoning.
  - **Emerging Topics:** [CS725](#)–Foundations of Machine Learning, Artificial Intelligence, Introduction to Blockchains, Cryptocurrencies and Smart Contracts.
  - **Online Courses:** Machine Learning Specialization ([link](#)), TensorFlow Developer Professional Certificate ([link](#)), Deep Learning Specialization ([link](#)), Generative Adversarial Networks ([GANs](#)) Specialization, Introduction to Large Language Models ([LLMs](#)).
